

HOW IT WORKS

SCAI Datasteward Workflow

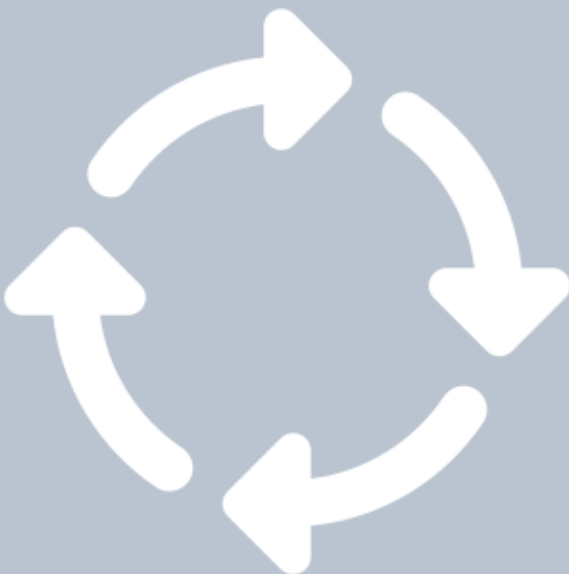

STEP 1 - DATA UPLOAD

Upload your data as .csv to the data steward.

STEP 2 - DATA GETS AUTOMATICALLY MAPPED TO THE CCDM

In case a variable is not found it can be mapped manually to the ccdm. In case no variable is suits your needs it can be added.

STEP 3 - ANALYSE YOUR DATA

You can use the Clinical Viewer to analyse your data or use the model explorer to view your data as network graph or as data table
